Mr. Frederick Stone
Stoneridge Farms
362 Curtis Road
Arundel, ME 04046-4475

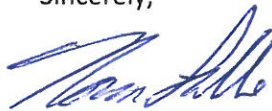

Dear Fred,

This letter is to alert you to a water quality concern relating to your property. As part of the Environmental Protection Agency's (EPA) required sampling for emerging contaminants ("...a chemical or material that is characterized by a perceived, potential or real threat to human health..."), the Water District has recently discovered PFOS (perfluorooctane sulfonate) and PFOA (perfluorooctanoic acid) above the Health Advisory Level (HAL) of 70 parts per trillion (ppt) in the monitoring wells on your property. A description of these compounds is attached. For more information relating to this from the EPA, go to <https://www.epa.gov/ground-water-and-drinking-water/drinking-water-health-advisories-pfoa-and-pfos>.

After performing additional testing beyond and surrounding your property, it is clear that the highest concentration and likely source of the PFOS/PFOA plume is on your property. More specifically, the combined PFOS/PFOA level in monitoring well 14-09, which is a few yards from your domestic well, was detected in excess of 140 ppt; fully twice the HAL of 70 ppt.

The Water District is concerned that your family and your livestock may be consuming water that contains levels of PFOS/PFOA well above the HAL. In order to confirm this, the District is willing, on a one-time basis, to test a sample of water from your domestic well at no cost to you. Please let me know at your convenience if you'd like to proceed with this test.

Sincerely,

Normand R. Labbe
Superintendent
